*1. Measurement range 0 %, 100 % refers min. and max. value per each input signal code.
E.g. for A3: ±19.99 mA, measurement range 0 % = -19.99 mA, measurement range 100 % = +19.99 mA.

Note) When input signal (within available input range) other than measurement range is needed to display, it is required to calculate display value in the measurement range.
Refer to the instruction manual for details.

- Normal Scaling

The display value increases when the input signal increases.

- Inverted Scaling

The display value decreases when the input signal increases.

The decimal point position can be set to any digit. Set it according to the 100% value.

■ DISPLAY SETTING MODE

PARAMETER	DISPLAY	FUNCTION	DEFAULT VALUE
Moving Average	RoFF	No moving averaging	RoFF
	R 2	Moving average with 2 samples
